An Examiner's Amendment to the record appears below. Should the changes and/or additions be unacceptable to Applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it MUST be submitted no later than the payment of the issue fee.

IN THE CLAIMS:

Claim 8, line 1, change "1" to -- 4 --.

Cancel Claim 9.

Authorization for this Examiner's Amendment was given in a telephone interview with Deborah S. Gladstein on 11/13/03.

The following is an Examiner's Statement of Reasons for Allowance: Applicant's arguments of 10/20/03 are convincing in that although a Figure within a Reference, i.e. Horvath et al. (4,689,453), (See Fig. 3) appears to illustrate a possibly constricted passageway between section (13) and terminal (2), lacking any support from the text for such a constriction, one cannot merely assume that the Figure is drawn to scale, and as such, the constricted passageway cannot be considered to be disclosed or taught by the Reference. Another example, is found within newly cited Sturzenegger et al. (4,471,187); the Reference is related to the submitted Reference, (EPO 0 075 668). Sturzenegger et al. teach the creating of resistance to gas flow in the breaker, but there does not appear to be any disclosure or teachings relating to the gas flow passage seen at the bottom of Figure 2 at the outlet-flow area of the quenching gas, formed by deflection surface (72) of base portion (60), as such, one cannot

assume the Figure is drawn to scale and that such a passage was intended with a constricted passageway. Such an interpretation can only be considered as "hindsight" in view of the instant disclosure of the Application. Therefore, the claim combination found within Claim 1, which includes

a flow deflection device provided in an outlet-flow area of the quenching gas, in order to deflect the quenching gas flow through more than 90° radially outward;

and a partition wall to separate the quenching gas flow before the deflection from the quenching gas flow after the deflection; wherein

a nozzle body is arranged on the partition wall, and, together with the flow deflection device, forms a nozzle constriction.

is considered to be novel and unobvious in view of the Prior Art of Record.

Any comments considered necessary by Applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
